Body Fat - Lean Body Mass Control

Body Fat Mass	- 21.8 lbs
Lean Body Mass	+ 5.5 lbs

(+) means to gain fat/lean (-) means to lose fat/lean

Segmental Fat Analysis

Basal Metabolic Rate

1175 kcal

Visceral Fat Level

Results Interpretation

Obesity Analysis

BMI is an index used to determine obesity by using height and weight. PBF is the percentage of body fat compared to body weight.

Segmental Lean Analysis

Evaluates whether the muscles are adequately developed in the body. In each segment, the top bar shows the comparison of muscle mass to ideal weight and the bottom bar shows that of the current weight.

Body Water Analysis

ECW/TBW is the ratio of Extracellular Water to Total Body Water, which is an important indicator whether the body water is balanced.

Visceral Fat Level

Visceral Fat Level is an indicator based on the estimated amount of fat surrounding internal organs in the abdomen. Maintain a Visceral Fat Level under 10 to stay healthy.
